Practice with if statements

1. If the temperature, stored in an `int` called `temp`, is less than 32 degrees, print "Careful, roads may be icy!"

2. Given the current month (stored as an `int` called `month`, where January is 1 and December is 12), if the month is between June and August (inclusive) print "It's summer!"

3. Given an `int x`, if `x` is divisible by 2 print "x is even." Otherwise print "x is odd."
