Practice with method headers

Write a method header (just the header, not the whole method) for each of the following.

1. A method that, given a person's birth date, returns whether or not their birthday has already passed this year.

2. A method that, given a person's birth date, returns how old they are.

3. A method that, given a number, prints a square of *s with size equal to the input number.

4. A method that, given a student's ID number and a CS department course number, returns whether the student has satisfied the prerequisites to take the specified course.

5. A method that, given a number, prints whether that number is a perfect square.

6. A method that, given a number, returns the square root of that number.
